## CERAMIC HOB KHC 3211

The touch-controlled Kernau KHC 3211 ceramic plate is equipped with 2 Hi-Light fields, thanks to which it reaches its maximum power in a very short time. Additionally, each field has a residual heat indicator, informing about heating of the switched off field. The symbol "H" is displayed for a specific field until it cools down, which reduces the risk of burns if you touch the surface of the plate. The user has 9 power levels at his disposal. The Auto-Stop function causes the hob to turn off automatically in the event of a long break in operation, liquid overheats or overheating, thus protecting it from damage.

### TECHNOLOGIES:

**TOUCH CONTROL:** Makes it easier to select the intended program. It is very simple and intuitive. The front of the device is smooth, which makes it easy to clean.

**AUTO STOP:** This function automatically turns off the hob in case of flooding. This eliminates the risk of damaging the device and the cabinet.

**STAND-BY:** When the device is turned off, it goes into sleep mode, i.e. STAND-BY, thanks to which it consumes only 0.5 W, which significantly reduces electricity bills.

**RESIDUAL HEAT INDICATOR:** When the surface of the hob is heated to more than 60 ° C, the letter "H" appears on the control panel, warning against possible burns.

**HI-LIGHT:** This function allows the plate to obtain maximum power in the selected field in a very short time. It allows you to quickly heat or boil food.
